
AskMaps P13n General Instructions

Personalization Project

Personalization Project Introduction

- This project looks to evaluate a new “Full Personalization” feature within Google Maps.
 - You will be asked to submit a series of queries via Google Maps on a desktop, some of which will be assigned, some of which you will create yourself.
 - You will then record what the response was via screenshots and answer several questions evaluating the response.
 - The exact details of the project will change from week to week. Sometimes you will be comparing Full Personalization responses to Non-Full Personalization responses, sometimes you’ll just be rating the full personalization responses on your own.
-

First Steps

1. Please read these guidelines carefully.
 2. Ensure the following settings are enabled for your personal account: [Web & App Activity \(WAA\)](#).
-

When the Project Goes Live

1. You will receive project-specific instructions for the particular project you are working on right as it goes live. Read them carefully.
 2. In these new instructions, you'll be presented with a link that will allow you to make a copy of the Feedback Sheet you'll use to evaluate the project.
 - Give editing permission to the following: askmaps-eval-submissions@google.com, manuelalejandro.flor@welocalize.com, and brenden.clawson@welocalize.com.
 - **You must do this before you begin working on the sheet. You will also be given a link to a tracker sheet. Please copy the link to your sheet next to your name.**
 3. The guidelines will also contain a scenario sheet with all the queries the client would like you to ask and instructions to create custom queries.
-

Screenshots

- The guidelines may ask you to provide screenshots of what Google Maps provided, both/either in full personalization of non-full personalization mode.
 - Do not add columns or rows to make room for additional screenshots, even if you have more than there's space for.
 - For instance, if you have six screenshots and there's only room for four, choose the four you think are most useful.
 - Each screenshot must be imbedded in a cell, only one screenshot per cell. Do not leave them floating freely in the sheet.
 - To imbed a screenshot:
 - i. Click on the cell you'd like to put the image in.
 - ii. Click on the image.
 - iii. Click the three dots on the image.
 - iv. Select "Put image in selected cell."
-

Helpfulness

- The guidelines may ask you to provide a helpfulness rating and accompanying helpfulness comments.
 - There should be a dropdown from which you can choose a helpfulness rating that will vary from “1- Not helpful at all” to “5-Extremely helpful”
 - The project-specific guidelines will include a table that will show you exactly when to choose each rating.
 - You’ll also be asked to include comments as to why you chose this rating.
 - Please see the examples to gauge what level of detail the client is looking for.
 - Write purposeful comments. Don’t just give simple stock answers like “The suggestions were helpful.” Your comments should adequately explain your reasoning.
-

Side-by-Side Comparison

- The guidelines may ask you to provide a side-by-side-comparison of both a “non-full personalization” and a “full personalization query”.
 - There should be a dropdown from which you can choose to which degree one side was better than the other, if one was.
 - You’ll also be asked to include comments as to why you chose this rating.
 - Please see the examples to gauge what level of detail the client is looking for.
 - Write purposeful comments. Don’t just give simple stock answers like “The personalization side was more useful.” Your comments should adequately explain your reasoning.
-

Issues

- The guidelines may ask you to log issues present in Google Maps' response to the query.
 - There should be a dropdown from which you can choose a list of issues.
 - The project-specific guidelines will include a table that will show you exactly when to choose each rating.
 - You'll also be asked to include comments as to why you chose this rating. Please explain briefly how this issues applied to you specifically
 - For instance, something like "Took over 40 seconds to load," if you chose "Latency (> 20 sec)"
-

Example Tasks - Recall

A	B	C	D	E	F	G	H	I	J	K	L	M
Your Gmail account you used for this task	Query #	Query Text	Response Please add a screenshots				Helpfulness Rating (1=not helpful at all - 5=Extremely helpful) Please see detailed rating guidance	Helpfulness Rationale	Issues (See descriptions) Select all which apply	Explanation for each selected issue	Other Issues	[OPTIONAL] Other Comments
example@gmail.com	example 1	What places did I save most recently?					5 - Extremely helpful	- Provides the correct answer. - Gives me my most recent saves, in chronological order. - Tells me exactly what list and when I saved the place, helping me jog my memory.	Latency (> 20 sec)	- High latency, took a while to get a response	n/a	n/a
example@gmail.com	example 2	when did I last visit my hairdresser?					1 - Not helpful at all	- Made up details. None of the places it mentioned are my hairdresser, and I've never visited or saved any of these. - Made incorrect assumptions about my visits and saves (invented a save). - Weird citation details e.g. [1]	inaccurate personal details Hallucinated/invented memory Awkward or robotic response	- Made up details about my activity, visits, and saves. - Hallucinated saves and visit activity - Awkwardly and confidently told me about my visits and saves of hairdressers I've never been to or looked at.	n/a	n/a

Example Task - Side-by-Side

A	B	C	D	E	F	G	H	I	J	K	L	M
Your Gmail account you used for this task	Query #	Query Text	Response (Non-Personalization) Please add a screenshots				Response (Personalization) Please add a screenshots				Overall comparison	Comparison Rationale
example@gmail.com	example 1	places to eat									Personalization was slightly better	Personalization offered better places as it presented restaurants for the cuisine I actually like and also had a section of places which are supposed to be more laid back, which I like. Personalization was leading with some places I already know and rated highly. They could have been mentioned later or get less prominence. Still personalization helped me to better narrow things down. I didn't like the table on the non-personalization side
N	O	P	Q	R	S	T	U	V				
Helpfulness Rating for Non-Personalization (1=not helpful at all - 5=Extremely helpful) Please see detailed rating guidance	Helpfulness Rating for Personalization (1=not helpful at all - 5=Extremely helpful) Please see detailed rating guidance	Helpfulness Rationale	Which side (Personalization or Non-Personalization) was offering the better set of places for you personally?	Which side (Personalization or Non-Personalization) was offering the better description of places?	Issues for Personalization (See descriptions) Select all which apply	Explanation for each selected issue for Personalization	Other Issues	[OPTIONAL] Other Comments				
3 - Mostly helpful	4 - Very helpful	Both were helpful. However, personalization was more helpful to make a call and narrow things down as it already did some preselection based on what it knows about me.	Personalization	Both were about the same	Ignored personal relationship to ...	Ignored relationship to place: I actually know one of the listed places quite well and have looked at their menu before/have been there before but Maps seems to not know	n/a	n/a				

IMPORTANT!!

- **The format of your sheet must match the format shown in the examples exactly.** The client will not accept sheets that don't. If your sheet has formatting issues, you will be asked to fix them.
 - Make sure you are including all columns that are in the examples. Do not add additional columns that aren't in the examples. Do not add another row for additional pictures.
 - **Don't wait till the last minute to complete this project.** Please work at a steady pace instead of trying to finish the project right at the deadline. This gives us the opportunity to fix quality issues early and helps us track how much work is left to do.
 - **If there is text in brackets**, such as "Places to buy coffee in [city]," **replace what's in the brackets with something relevant to you.** For instance, "Places to buy coffee in Chicago" if you live in Chicago.
 - **Make sure to follow the instructions** in the guidelines and scenario sheets **when creating custom queries.**
-
